技术规格

Background:	This gene encodes a calcium-binding protein belonging to the penta-EF-hand protein family. The encoded protein has been shown to form a heterodimer with the programmed cell death 6 gene product and may modulate its function in Ca(2+) signaling. Alternative splicing results in multiple transcript variants and a pseudogene has been identified on chromosome 1.
Applications:	ELISA, WB, IHC
Name of antibody:	PEF1
Immunogen:	Fusion protein of human PEF1
Full name:	penta-EF-hand domain containing 1
Synonyms :	ABP32; PEF1A
