技术规格

Background:	This gene encodes a subunit of the small nuclear RNA (snRNA)-activating protein complex that plays a role in the transcription of snRNA genes. This complex binds t o the promoters of snRNA genes transcribed by either RNA polymerase II or III and recruits other regulatory f actors to activate snRNA gene transcription. The encod ed protein may play a role in stabilizing this complex. A pseudogene of this gene has been identified on chr omosome 6.
