技术规格

Background:	The protein encoded by this gene is a member of the purine/pyrimidine phosphoribosyltransferase family. It is a regulatory allosteric enzyme that catalyzes the first step of de novo purine nucleotide biosynthetic pathway. This gene and PAICS/AIRC gene, a bifunctional enzyme catalyzing steps six and seven of this pathway, are located in close proximity on chromosome 4, and divergently transcribed from an intergenic region.
Applications:	ELISA, WB, IHC
Name of antibody:	PPAT
Immunogen:	Fusion protein of human PPAT
Full name:	phosphoribosyl pyrophosphate amidotransferase
