技术规格

Background:	The protein encoded by this gene is a member of serine /threonine protein kinase family. This kinase contains a dual leucine-zipper motif, and has been shown to form dimers/oligomers through its leucine-zipper motif. This kinase can phosphorylate and activate MAPK8/JNK, MAP2K7/MKK7, which suggests a role in the JNK signaling pathway.

ELISA Recommended dilution:	1000-5000
IHC positive control:	Human liver cancer
