技术规格

Background:	This is calcium-independent, phospholipid-dependent, serine - and threonine-specific enzyme. PKC is activated by diacyl glycerol which in turn phosphorylates a range of cellular pr oteins. PKC also serves as the receptor for phorbol esters, a class of tumor promoters. May play a role in antigen-dep endent control of B-cell function. Phosphorylates MUC1 in t he C-terminal and regulates the interaction between MUC1 and beta-catenin.
