技术规格

Background:	This gene encodes a member of the transglutaminase family. The encoded protein catalyzes formation of protein cross-links between glutamine and lysine residues, often resulting in stabilization of protein assemblies. This reaction is calcium dependent. Mutations in this gene have been associated with acral peeling skin syndrome.
Applications:	ELISA, WB, IHC
Name of antibody:	TGM5
Immunogen:	Fusion protein of human TGM5
Full name:	transglutaminase 5
Synonyms :	TGX; PSS2; TGM6; TGMX; TGASE5; TGASEX
SwissProt:	O43548
ELISA Recommended dilution:	2000-5000
IHC positive control:	Human liver cancer and human ovarian cancer

IHC Recommend dilution:	25-100
WB Predicted band size:	81 kDa
WB Positive control:	Hela and A431 cells, Mouse skin tissue, MCF7 and K562 cells
