技术规格

Background:	The protein encoded by this gene belongs to the SMAD, a family of proteins similar to the gene products of the Drosophila gene 'mothers against decapentaplegic' (Mad) and the C. elegans gene Sma. SMAD proteins are signal transducers and transcriptional modulators that mediate multiple signaling pathways. This protein mediates the signals of the bone morphogenetic proteins (BMPs), which are involved in a range of biological activities including cell growth, apoptosis, morphogenesis, development and immune responses.
Applications:	WB, IHC
Name of antibody:	SMAD1(Ab-465)
Immunogen:	Synthesized non-phosphopeptide derived from human

	Smad1 around the phosphorylation site of serine 465 (I-S-S-V-S(p)).
