技术规格

Background:	This gene encodes a intramembrane zinc metalloprotease, which is essential in development. This protease functions in the signal protein activation involved in sterol control of transcription and the ER stress response. Mutations in this gene have been associated with ichthyosis follicularis with atrichia and photophobia (IFAP syndrome); IFAP syndrome has been quantitatively linked to a reduction in cholesterol homeostasis and ER stress response.
Applications:	ELISA, WB, IHC
Name of antibody:	MBTPS2
Immunogen:	Synthetic peptide of human MBTPS2
Full name:	membrane bound transcription factor peptidase, site 2
