| <b>Background:</b>       | The protein encoded by this gene is a member of the tripartite motif (TRIM) family. The TRIM motif includes three zinc-binding domains, a RING, a B-box type 1 and a B-box type 2, and a coiled-coil region. The function of this protein has not been identified. This gene lies within the major histocompatibility complex class I region on chromosome 6. Alternate splicing results in two transcript variants encoding different isoforms. |
| <b>Applications:</b>     | ELISA, WB, IHC   |
| <b>Name of antibody:</b> | TRIM39   |
| <b>Immunogen:</b>        | Fusion protein of human TRIM39   |
