技术规格

Background:	This gene encodes a tyrosine kinase that binds Cdc42Hs in its GTP-bound form and inhibits both the intrinsic and GTPase-activating protein (GAP)-stimulated GTPase activity of Cdc42Hs. This binding is mediated by a unique sequence of 47 amino acids C-terminal to an SH3 domain. The protein may be involved in a regulatory mechanism that sustains the GTP-bound active form of Cdc42Hs and which is directly linked to a tyrosine phosphorylation signal transduction pathway.
Applications:	WB
Name of antibody:	TNK2(Ab-284)
Immunogen:	Synthesized peptide derived from Internal of human ACK1.
Full name:	tyrosine kinase, non-receptor, 2
