技术规格

Background:	This gene encodes an astacin-like, zinc-dependent, me talloprotease that belongs to the peptidase M12A fam ily. This protease processes procollagen C-propeptides, such as chordin, pro-biglycan and pro-lysyl oxidase. St udies in mice suggest that this gene plays multiple ro les in the development of mammalian heart, and is es sential for the formation of the interventricular septu m. Allelic variants of this gene are associated with atri al septal defect type 6. Alternatively spliced transcript variants encoding different isoforms have been found for this gene [provided by PofSeq Mar 2011]
