技术规格

Background:	This gene product is the founding member of the evolutionarily conserved CAN (Cerberus and DAN) family of proteins, which contain a domain resembling the CTCK (C-terminal cystine knot-like) motif found in a number of signaling molecules. These proteins are secreted, and act as BMP (bone morphogenetic protein) antagonists by binding to BMPs and preventing them from interacting with their receptors. They may thus play an important role during growth and development.
Applications:	ELISA, IHC
Name of antibody:	NBL1
Immunogen:	Fusion protein of human NBL1

Full name:	neuroblastoma 1, DAN family BMP antagonist
