技术规格

Background:	The SIII (or elongin) transcription elongation factor complex stimulates the rate of transcription elongation by RNA polymerase II by suppressing the transient pausing of the polymerase at many sites along the DNA template. This complex is a heterotrimer, composed of the transcriptionally active subunit A, A2 or A3 (or elongin A, A2 or A3) and two regulatory subunits, B and C (or elongin B and C). This gene encodes subunit A3. A3 and A are ubiquitously expressed, whereas A2 is specifically expressed in the testis.
Applications:	WB
Name of antibody:	TCEB3C
Immunogen:	Synthesized peptide derived from internal of human ELOA3.
Full name:	transcription elongation factor B polypeptide 3C (elongin A3)

Synonyms :	HsT829; TCEB3L2
SwissProt:	Q8NG57
WB Predicted band size:	60 kDa
WB Positive control:	COLO cells lysate
WB Recommended dilution:	500-3000
