技术规格

Background:	This gene encodes a DNA damage response protein. The encoded protein may play a role in G2/M checkpoint arrest via maintenance of inhibitory phosphorylation of cyclin-dependent kinase 1. Mutations in this gene have been associated with primary autosomal recessive microcephaly 1 and premature chromosome condensation syndrome. Alternatively spliced transcript variants have been described.
Applications:	WB, IHC
Name of antibody:	MCPH1
Immunogen:	Synthesized peptide derived from internal of human MCPH1.
