技术规格

Background:	The ADF (actin-depolymerizing factor)/cofilin family (se e MIM 601442) is composed of stimulus-responsive m ediators of actin dynamics. ADF/cofilin proteins are in activated by kinases such as LIM domain kinase-1 (LI MK1; MIM 601329). The SSH family appears to play a role in actin dynamics by reactivating ADF/cofilin prot eins in vivo (Niwa et al., 2002 [PubMed 11832213]).
