技术规格

Background:	This gene encodes a member of the prefoldin beta subunit family. The encoded protein is one of six subunits of prefoldin, a molecular chaperone complex that binds and stabilizes newly synthesized polypeptides, thereby allowing them to fold correctly. The complex, consisting of two alpha and four beta subunits, forms a double beta barrel assembly with six protruding coiled-coils.
Applications:	WB
Name of antibody:	PFDN1
Immunogen:	Synthesized peptide derived from internal of human PFDN1.
