技术规格

Background:	This gene encodes a SCAN box domain-containing pr otein. The SCAN domain is a highly conserved, leucin e-rich motif of approximately 60 aa originally found within a subfamily of zinc finger proteins. This gene belongs to a family of genes that encode an isolated SCAN domain, but no zinc finger motif. This protein binds to and may regulate the function of the transcr iption factor myeloid zinc finger 1B. Alternate splicing results in multiple transcript variants.
Applications:	ELISA, IHC
Name of antibody:	SCAND1
Immunogen:	Fusion protein of human SCAND1
Full name:	SCAN domain containing 1
Synonyms:	RAZ1; SDP1

SwissProt:	P57086
ELISA Recommended dilution:	5000-10000
IHC positive control:	Human esophagus cancer
IHC Recommend dilution:	50-300
