## 技术规格

Background:	This gene encodes a member of the STAT-induced STA T inhibitor (SSI), also known as suppressor of cytokine signaling (SOCS), family. SSI family members are cytoki ne-inducible negative regulators of cytokine signaling. The expression of this gene can be induced by a subs et of cytokines, including IL2, IL3 erythropoietin (EPO), CSF2/GM-CSF, and interferon (IFN)-gamma. The protein encoded by this gene functions downstream of cytokin e receptors, and takes part in a negative feedback loo p to attenuate cytokine signaling. Knockout studies in mice suggested the role of this gene as a modulator o f IFN-gamma action, which is required for normal post natal growth and survival.
