技术规格

Background:	Tissue-specific splicing factor with potential implication in the regulation of alternative splicing during neuron and germ cell differentiation. Antagonizes SRSF1-mediated BCL-X splicing. May affect the choice of alternative 5' splice sites by binding to specific sequences in exons and antagonizing the SR protein SRSF1.
Applications:	ELISA, WB, IHC
Name of antibody:	RBM11
Immunogen:	Fusion protein of human RBM11
Full name:	RNA binding motif protein 11
SwissProt:	P57052
ELISA Recommended dilution:	5000-10000

IHC positive control:	Human ovarian cancer
IHC Recommend dilution:	25-100
WB Predicted band size:	32 kDa
WB Positive control:	Human kidney tissue , Human cerebella tissue and Human fetal brain tissue lysates
WB Recommended dilution:	200-1000
