技术规格

Background:	This gene product appears to function as a negative regulator of the ras signal transduction pathway. Mutations in this gene have been linked to neurofibromatosis type 1, juvenile myelomonocytic leukemia and Watson syndrome. The mRNA for this gene is subject to RNA editing (CGA>UGA->Arg1306Term) resulting in premature translation termination. Alternatively spliced transcript variants encoding different isoforms have also been described for this gene.
Applications:	ELISA, IHC
Name of antibody:	NF1
Immunogen:	Synthetic peptide of human NF1
Full name:	neurofibromin 1

SwissProt:	P21359
ELISA Recommended dilution:	500-1000
IHC positive control:	Human liver cancer and human gastric cancer
