技术规格

Background:	This gene encodes a member of the Rho GTPase-activating protein superfamily. The encoded protein may function as a Rho GTPase-activating protein. Alterations in this gene may be associated with several diseases, including rheumatoid arthritis, celiac disease, and multiple sclerosis. Alternate splicing results in multiple transcript variants encoding distinct isoforms.
Applications:	ELISA, IHC
Name of antibody:	TAGAP
Immunogen:	Fusion protein of human TAGAP
Full name:	T-cell activation RhoGTPase activating protein
Synonyms:	FKSG15; IDDM21; TAGAP1; ARHGAP47
SwissProt:	Q8N103

ELISA Recommended dilution:	5000-10000
IHC positive control:	Human cervical cancer and Human tonsil
IHC Recommend dilution:	25-100
