技术规格

Background:	This gene encodes a member of the mitochondrial carrier subfamily of solute carrier proteins. Members of this family include nuclear-encoded transporters that translocate small metabolites across the mitochondrial membrane. This protein regulates the movement of citrate across the inner membranes of the mitochondria. Mutations in this gene have been associated with combined D-2- and L-2-hydroxyglutaric aciduria.
Applications:	ELISA, IHC
Name of antibody:	SLC25A1
Immunogen:	Fusion protein of human SLC25A1
Full name:	solute carrier family 25 (mitochondrial carrier; citrate transporter), member 1

Synonyms :	CTP; SEA; D2L2AD; SLC20A3
SwissProt:	P53007
ELISA Recommended dilution:	2000-5000
IHC positive control:	Human thyroid cancer and human liver cancer
IHC Recommend dilution:	25-100
