### 技术规格

<b>Background:</b>	The product of this gene is a component of the nuclear cap-binding protein complex (CBC), which binds to the mono methylated 5' cap of nascent pre-mRNA in the nucleoplasm. The encoded protein has an RNP domain commonly found in RNA binding proteins, and contains the cap-binding activity. The CBC promotes pre-mRNA splicing, 3'-end processing, RNA nuclear export, and nonsense-mediated mRNA decay.
