技术规格

Background:	The protein encoded by this gene is a member of the protein tyrosine phosphatase (PTP) family. PTPs are known to be signaling molecules that regulate a variety of cellular processes including cell growth, differentiation, mitosis, and oncogenic transformation. This PTP contains an extracellular domain, a single transmembrane segment and two tandem intracytoplasmic catalytic domains, and thus is classified as a receptor type PTP.
Applications:	WB
Name of antibody:	PTPRC(Phospho-Ser1007)
Immunogen:	Peptide sequence around phosphorylation site of serine 1007 (D-D-S(p)-D-S) derived from Human CD45
