技术规格

Background:	This gene encodes a member of the SWI/SNF family of proteins. The encoded protein is an ATPase which is expressed in diverse tissues and contributes to the chromatin remodeling complex that is involved in transcription. The protein may also play a role in DNA damage, growth inhibition and apoptosis of cancer cells. Alternative splicing results in multiple transcript variants.
Applications:	ELISA, IHC
Name of antibody:	SMARCA1
Immunogen:	Synthetic peptide of human SMARCA1
Full name:	SWI/SNF related, matrix associated, actin dependent regulator of chromatin, subfamily a, member 1
