技术规格

Background:	This gene encodes a protein that was first identified in <i>Xenopus laevis</i> by its role in a mesoderm induction early response (MIER). The encoded protein functions as a transcriptional regulator. Alternatively spliced transcript variants encode multiple isoforms, some of which lack a C-terminal nuclear localization signal.
Applications:	ELISA, IHC
Name of antibody:	MIER1
Immunogen:	Fusion protein of human MIER1
Full name:	MIER1 transcriptional regulator
Synonyms:	ER1; MI-ER1
SwissProt:	Q8N108
ELISA Recommended dilution:	5000-10000

IHC positive control:	Human tonsil
IHC Recommend dilution:	100-200
