### 技术规格

<b>Background:</b>	This gene is part of a 500 kb inverted duplication on chromosome 5q13. This duplicated region contains at least four genes and repetitive elements which make it prone to rearrangements and deletions. The repetitiveness and complexity of the sequence have also caused difficulty in determining the organization of this genomic region. The telomeric and centromeric copies of this gene are nearly identical and encode the same protein.
<b>Applications:</b>	ELISA, WB
<b>Name of antibody:</b>	SMN1
<b>Immunogen:</b>	Synthetic peptide of human SMN1
<b>Full name:</b>	survival of motor neuron 1, telomeric
