技术规格

Background:	Green fluorescence protein (GFP) is a 27 kDa protein derived from the jellyfish <i>Aequorea victoria</i> , which emits green light (emission peak at a wavelength of 509 nm) when excited by blue light (excitation peak at a wavelength of 395 nm). Green Fluorescent Protein (GFP) has become an invaluable tool in cell biology research, since its intrinsic fluorescence can be visualized in living cells.
Applications:	WB
Name of antibody:	mGFP
Immunogen:	Purified mGFP protein expressed in HEK293 cell
Full name:	mGFP
