

AP 标记小鼠抗兔 IgM

中文名称: AP 标记小鼠抗兔 IgM

英文名称: AP-conjugated Mouse Anti-Rabbit IgM

相关类别: AP 标记二抗

储 存: 冷冻(-20℃)

标 记 物: AP

技术规格

Background:	IgM normally constitutes about 10% of serum immunoglobulins. IgM an tibody is prominent in early immune responses to most antigens and is largely confined to plasma due to it's large size. Monomeric IgM is ex pressed as a membrane bound antibody on the surface of B cells and as a pentamer when secreted by plasma cells. Due to it's high valency IgM is more efficient than other isotypes is binding antigens with repeating epitopes (virus particles and red blood cells) and is more efficient than IgG in activiating the complement pathway. The gene for the mu constant region contains four domains separated by short intervening s equences.
Applications:	1/2000-10000 for ELISA 1/1000-5000 for Western blotting 1/200-1000 f or Immunohistochemistry/cytochemistry
