## 技术规格

Background	Based on immunoelectrophoresis and/or ELISA, the antibody reacts with whole molecule goat IgG. It also reacts with the light chains o f other goat immunoglobulins. No antibody was detected against n on- immunoglobulin serum proteins. The antibody has been tested by ELISA and/or solid-phase adsorbed to ensure minimal cross-reaction with chicken, guinea pig, Syrian hamster, horse, human, mouse, rabbit and rat serum proteins, but it may cross-react with immunog lobulins from other species.
