技术规格

Background:	Phosphorylates proteins on serine, threonine, and tyrosine. Probably associated with cell proliferation. Essential for chromosome alignment by enhancing AURKB activity (via direct CDCA8 phosphorylation) at the centromere, and for the mitotic checkpoint.
Applications:	WB, IHC
Name of antibody:	TTK(Ab-676)
Immunogen:	Synthesized non-phosphopeptide derived from human TTK around the phosphorylation site of threonine 676 (D-T-T(p)-S-V).
Full name:	TTK protein kinase
Synonyms :	ESK; PYT; CT96; MPH1; MPS1; MPS1L1
SwissProt:	P33981
IHC positive control:	Human brain tissue

IHC Recommend dilution:	50-100
WB Predicted band size:	97 kDa
WB Positive control:	Huvec cells treated with etoposide (25uM, 24hours) lysate
WB Recommended dilution:	500-3000
