

MSN 抗原（重组蛋白）

中文名称： MSN 抗原（重组蛋白）

英文名称： MSN Antigen (Recombinant Protein)

别 名： HEL70

储 存： 冷冻（-20℃）

相关类别： 抗原

概述

Fusion protein corresponding to N terminal 300 amino acids of human MSN

技术规格

| | |
|---------------------------|---|
| Full name: | moesin |
| Synonyms: | HEL70 |
| Swissprot: | P26038 |
| Gene Accession: | BC017293 |
| Purity: | >85%, as determined by Coomassie blue stained SDS-PAGE |
| Expression system: | Escherichia coli |
| Tags: | His tag C-Terminus, GST tag N-Terminus |
| Background: | Moesin (for membrane-organizing extension spike protein) is a member of the ERM family which includes ezrin and radixin. ERM proteins appear to function as cross-linkers between plasma membranes and actin-based cytoskeletons. Moesin is localized to filopodia and other membranous protrusions that are important for cell-cell recognition and signaling and for cell movement. Probably involved in connections of major cytoskeletal structures to the plasma membrane. May inhibit herpes simplex virus 1 infection at an early stage. |
