

RPL28 抗原（重组蛋白）

中文名称： RPL28 抗原（重组蛋白）

英文名称： RPL28 Antigen (Recombinant Protein)

别 名： ribosomal protein L28; L28

储 存： 冷冻（-20℃）

相关类别： 抗原

概述

Fusion protein corresponding to a region derived from 2-137 amino acids of human RPL28

技术规格

Full name:	ribosomal protein L28
Synonyms:	L28
Swissprot:	P46779
Gene Accession:	BC010173
Purity:	>85%, as determined by Coomassie blue stained SDS-PAGE
Expression system:	Escherichia coli
Tags:	His tag C-Terminus, GST tag N-Terminus
Background:	Ribosomes, the organelles that catalyze protein synthesis, consist of a small 40S subunit and a large 60S subunit. Together these subunits are composed of 4 RNA species and approximately 80 structurally distinct proteins. This gene encodes a ribosomal protein that is a component of the 60S subunit. The protein belongs to the L28E family of ribosomal proteins. It is located in the cytoplasm. Variable expression of this gene in colorectal cancers compared to adjacent normal tissues has been observed, although no correlation between the level of expression and the severity of the disease has been found. As is typical for genes encoding ribosomal proteins, there are multiple processed pseudo

	genes of this gene dispersed through the genome. Alternative splicing results in multiple transcript variants encoding distinct isoforms.
