

狗 IgG

中文名称: 狗 IgG

英文名称: Dog IgG

相关类别: 抗原

储 存: 冷冻(-20℃)

技术规格

Background:	Immunoglobulin G (IgG) is one of the most abundant proteins in se rum with normal levels between 8-17 mg/mL in adult blood. IgG is important for our defense against microorganisms and the molecule s are produced by B lymphocytes as a part of our adaptive immune response. The IgG molecule has two separate functions, to bind to t he pathogen that elicited the response and to recruit other cells and d molecules to destroy the antigen. The variability of the IgG pool is generated by somatic recombination and the number of specificities in an individual at a given time point is estimated to be 1011 variants.
Applications:	Optimal tested applications and working dilutions must be determined by the end user.
