

牛 IgG (H+L)

中文名称: 牛 IgG (H+L)

Bovine IgG (H+L) 英文名称:

相关类别: IgG

储 存: 冷冻(-20℃) 避光

技术规格

Background	Immunoglobulin G (IgG) is one of the most abundant proteins in ser um with normal levels between 8-17 mg/mL in adult blood. IgG is i mportant for our defense against microorganisms and the molecules are produced by B lymphocytes as a part of our adaptive immune r esponse. The IgG molecule has two separate functions, to bind to the pathogen that elicited the response and to recruit other cells and molecules to destroy the antigen. The variability of the IgG pool is g enerated by somatic recombination and the number of specificities in an individual at a given time point is estimated to be 1011 variant s.
Applications	Optimal tested applications and working dilutions must be determine d by the end user.
